FULL STACK DEVELOPER

Fullstack developer with an eye for problem-solving! I'm a graduate of General Assembly Software Engineering bootcamp, and I have a passion for learning new coding technologies, and being creative. My background is also in customer service and marketing.

TECHNICAL & INTERPERSONAL SKILLS

Languages: HTML, JavaScript, React, Python, Django, Next.js, Flutter, Dart
Libraries and Frameworks: Express.js, Node.js, EJS, jQuery, React-Bootstrap, CSS, SCSS, SASS, Material-UI
Databases and other: PostgreSQL, MongoDB, Mongoose, Postman, RESTful Routing, JSON API, CSS, SASS, Material-UI, Heroku, Netlify, Docker, Mocha/Chai Testing
Soft Skills: Verbal/Non-Verbal Communication, Teamwork, Adaptability, Optimism, Organization, Problem-Solving, Creativity, Professionalism, Dependability, Discipline, Initiative, Planning, Versatility, and Cultural Intelligence

TECHNICAL PROJECTS

BeautyBar - Github | Heroku - EJS | Node.js | MongoDB | Mongoose | CSS | Materialize | Postman
I built and launched this application that displays beauty spas services, and allows users to make/edit/delete their choices. This is a full-stack application using Node, Express, Mongoose, and MongoDB to connect and display the data. The Data I used was from an API that I created myself using a data entity/Model. This application also has complete CRUD data operations so the user can customize their experience. This application also underwent automatic testing using Mocha and Chai testing libraries, and a built-in pipeline connecting Github, Heroku, and Docker. To style this application I used CSS stylesheet along with a Materialize framework, I deployed it online using Heroku and Docker.

DTox - Github | Netlify- React | MongoDB | SASS | Materialize | MERN Stack | API | PostgreSQL | AJAX
I built and launched this application that informs the public about toxins inside our everyday foods, and products. It displays alternative options and allows a user to create their own profile and save their own healthy alternative list.
This application was built as a team. I worked with others to architect, design, and collaboratively build a Mern-stack web application. My role within the group was Release manager, I was responsible for handling branches, keeping master safe, and resolving merge conflicts on Github. I was also Product Manager and was the originator of the project idea. To stay organized we used a Trello Board to plan out our daily tasks and to stay on track, I was also responsible for creating the Wireframe and ERD for the project. This project was deployed online using Netlify,

Plush LaMode - Github | Heroku - Django |Python | Materialize | Heroku | PostgresQL | Authentication/Authorization | CSS
I built and launched this application that displays dresses and accessories and allows users to customize and save their choices. This web application was created using Python-based Django web framework. I persisted my data in PostgreSQL, I have two models in this application including dresses and accessories. Users may be authenticated using Django's built-in authentication. I implemented authorization by restricting access to the creation, updating, and deletion of resources. I used CSS and Materialize framework to style the application, and I deployed online using Heroku.

EXPERIENCE

Skywest Airlines Flight attendant   12/2018-11/2021 Salt Lake City, Utah

- Read and interpreted service and emergency instructions, also communicated information to passengers and crew as required.
- Worked independently without supervision and observation in an absentee workforce.
- Ensured the safety, security, and comfort of passengers on board the aircraft, and Secured and monitored the cabin regularly.
- Assisted passengers with special needs including children, disabled persons, and elders.
- Maintained the company's culture through exceptional customer service.
- Provided leadership, direction, and assistance during an emergency.
-

Matrix Residential Marketing Representative   08/2015-10/2018 Atlanta, Georgia

- Increased brand awareness, and maintained a positive brand image.
- Researched competitors to stay current with similar residences on the market, developed and maintained positive relationships with clients.

- Helped property managers find qualified tenants to lease the apartments.
- Assisted clients with viewing tours, lease terms, and price negotiations.
- Developed and managed mailing lists and executed strategic email marketing campaigns.
- Posted creative posts regularly to the company's Facebook and Instagram pages.
- Maintained and stored documentation effectively.

EDUCATION

General Assembly   Remote, Certificate received: 10/31/2022
- Completed 450 hour coding bootcamp that involves creating four frontend, backend, and full-stack applications using focused on React, JavaScript, and Python

Codecademy   Detroit, MI 02/2022-05/2022
- Completed lessons in HTML and CSS

Henry Ford College   Dearborn, MI 06/2015-05/2017
- Completed coursework in Marketing
